Weather App

Small changes in HTML

No changes in CSS

Small changes in JavaScript

HTML CODE:--

Here is the image tag that is used for adding image

```
<div class="day-card">
  <div class="day-date"></div>
  <div class="day-weather-icon">
    <img src="weather-icon.png" alt="Weather Icon">
  </div>
  <div class="day-temperature"></div>
  <div class="day-description"></div>
  <div class="coordinates"></div>
</div>

<div class="day-card">
  <div class="day-date"></div>
  <div class="day-weather-icon">
    <img src="weather-icon.png" alt="Weather Icon">
  </div>
  <div class="day-temperature"></div>
  <div class="day-description"></div>
  <div class="coordinates"></div>
</div>

<div class="day-card">
  <div class="day-date"></div>
  <div class="day-weather-icon">
    <img src="weather-icon.png" alt="Weather Icon">
  </div>
  <div class="day-temperature"></div>
  <div class="day-description"></div>
  <div class="coordinates"></div>
</div>

</div>
</div>
```

JavaScript CODE:--

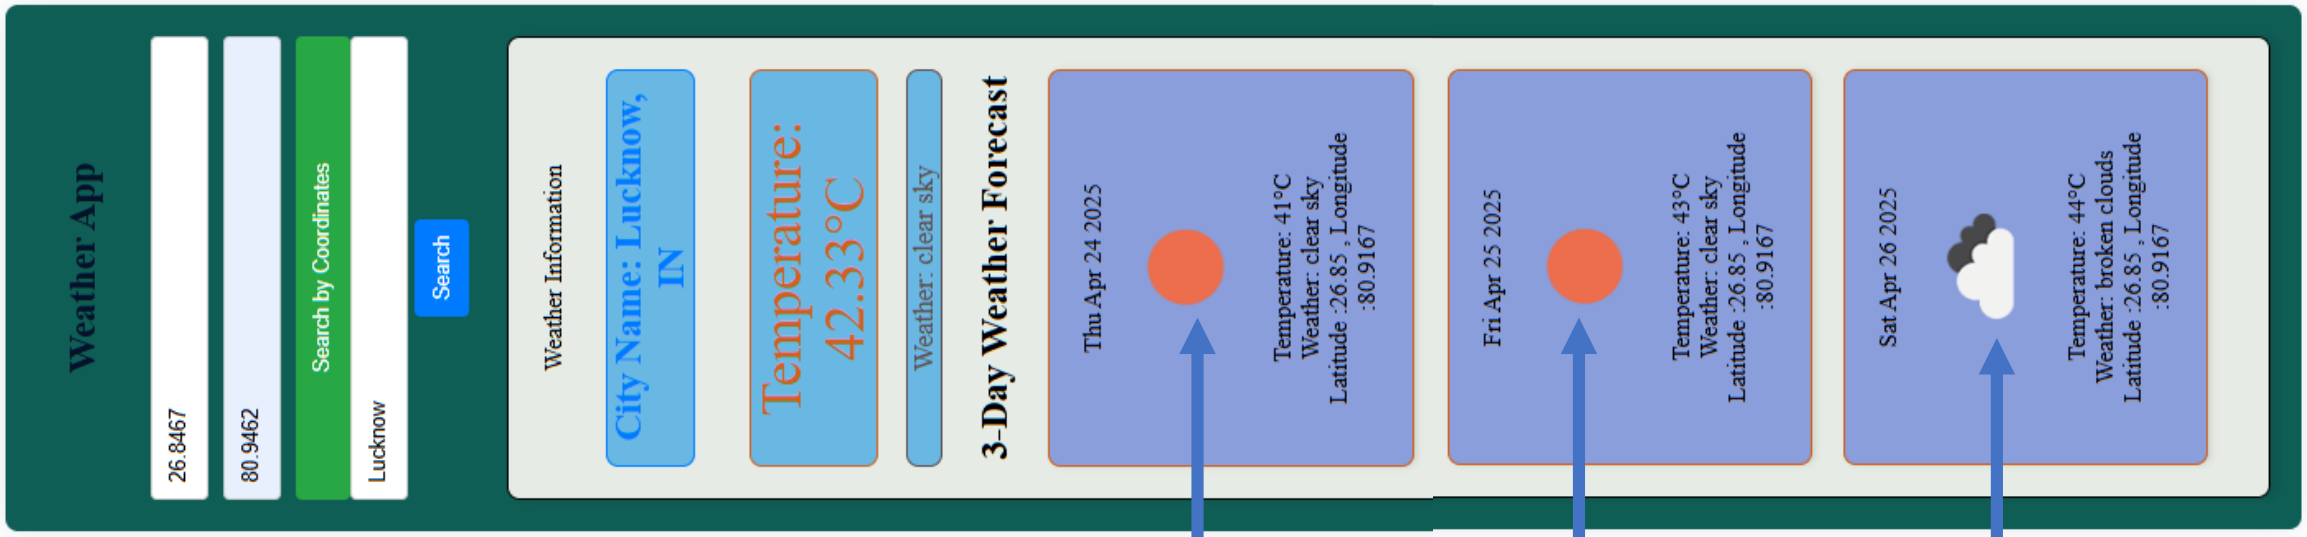

JavaScript Code For Dynamically Adding Icon in Weather Application.
Using this link icon can added dynamically based on weather condition.

```
const date = new Date(item.dt_txt).toDateString();
const icon =` https://openweathermap.org/img/wn/${item.weather[0].icon}@2x.png`;
const desc = `Weather: ${item.weather[0].description}`;

const lat =data.city.coord.lat;
const lon =data.city.coord.lon;

card.querySelector(".day-date").textContent = date;
card.querySelector(".day-weather-icon img").src = icon;
card.querySelector(".day-weather-icon img").alt = desc;
card.querySelector(".day-temperature").textContent = temp;
card.querySelector(".day-description").textContent = desc;
card.querySelector(".coordinates").textContent = `Latitude :${lat} , Longitude :${lon}`;
}
```

Final Outcome of Complete Weather App:-

Here is the Icon That is Added Dynamically added based on current weather condition
