Experiment 2

Mastering Databases and Integrations

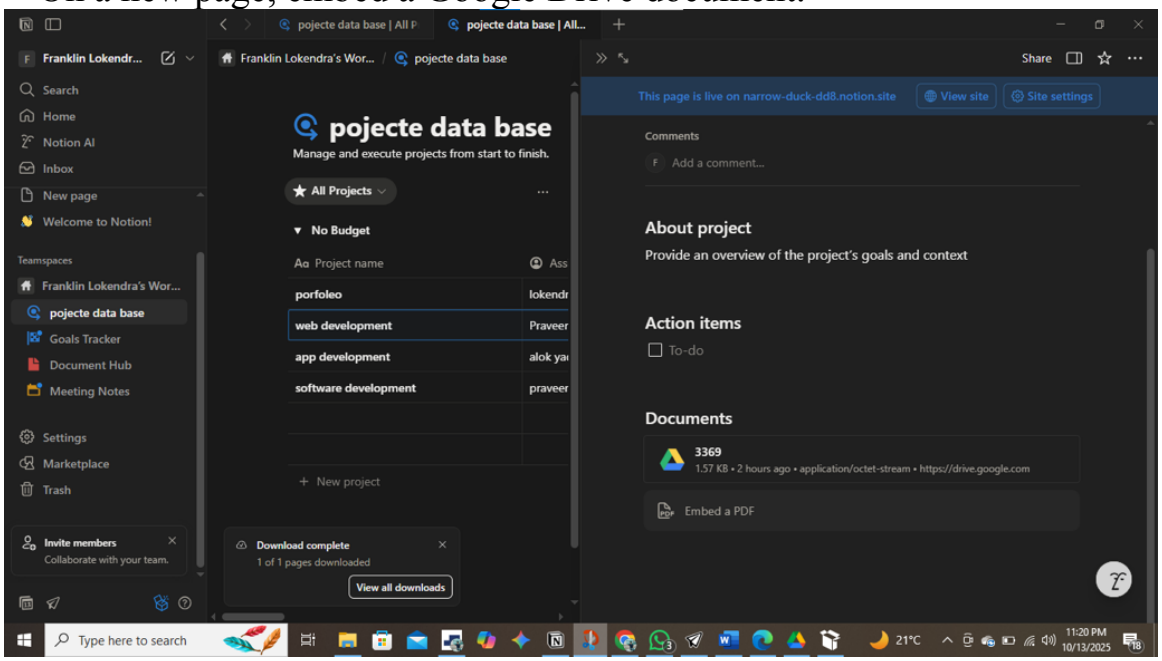

1. Create a Database:
○ Add a new page named "Project Database."
○ Use the database template to create a table with columns like "Project Name," "Status," "Due Date," "Assigned To," and "Priority."
○ Enter sample data for at least 5 projects.

2. Filter and Sort Data:
○ Use filters to display projects based on their status or priority.
○ Sort the table by due date or project name.

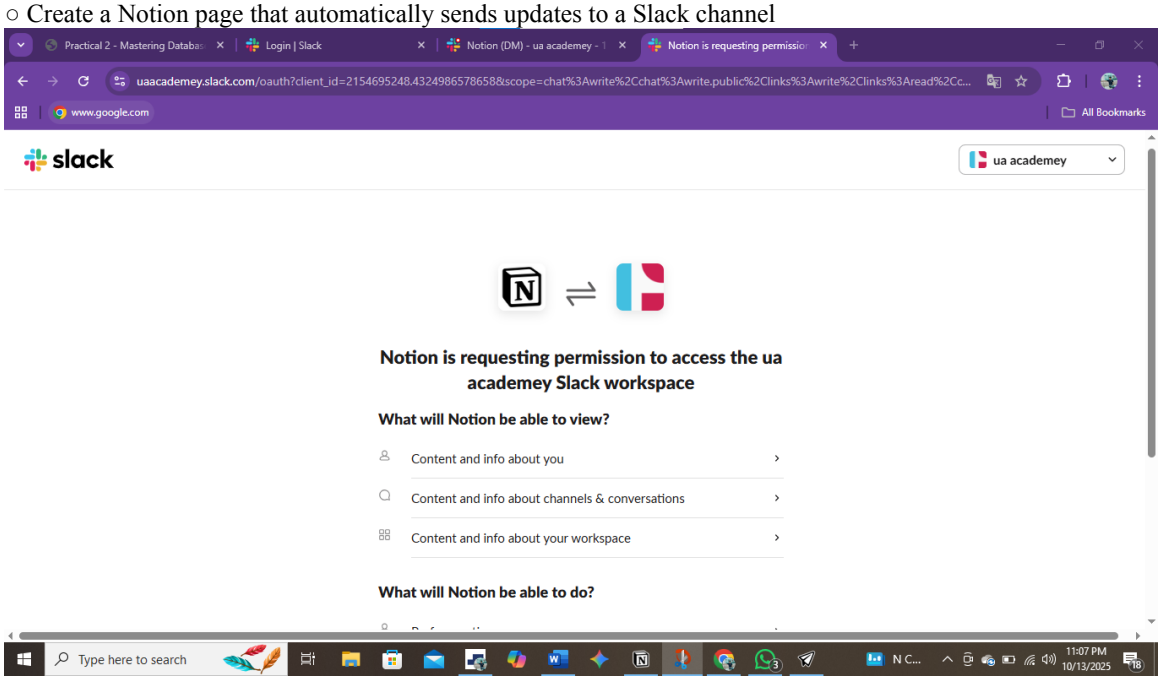

3. Integrate Google Drive:
○ On a new page, embed a Google Drive document.

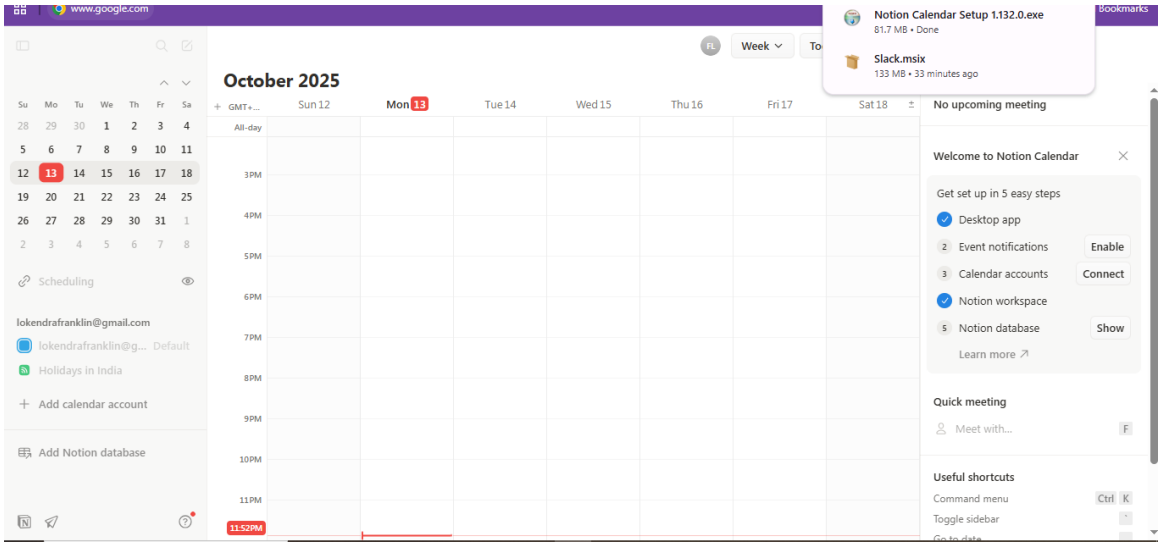

○ Allow others to view or edit the document directly within Notion.

4. Integrate Slack:
○ Connect Notion with Slack to receive notifications.
○ Create a Notion page that automatically sends updates to a Slack channel

5. Automate Tasks with Zapier:
○ Use Zapier to create an automation that adds new Notion tasks to your calendar
